

Contribute to COVID-19 Research

UCSD Reas Memory lab is looking for participants who are 55 years or older and either:

- Had a prior COVID-19 infection with lingering “brain fog”
- Do not have thinking complaints related to COVID-19 infection

Join research investigating the impact of COVID-19 on brain aging

Compensation for study completion is \$100

reaslab@health.ucsd.edu

This study uses magnetic resonance imaging (MRI), blood testing, and genetic information to investigate the impact of COVID-19 on brain structure and function in older age. Some of the risk factors and brain changes associated with COVID-19 are shared with neurodegenerative conditions such as Alzheimer’s disease. More research is needed to understand if COVID-19 may contribute to risk for cognitive decline or dementia. Study participation includes:

- Remote screening & scheduling
- Blood and saliva collection
- Cognitive testing
