The Dementia with Lewy Bodies Consortium

The purpose of the Dementia with Lewy Bodies Consortium is to develop a collection of samples from individuals diagnosed with Lewy body dementia (DLB) or Lewy body dementia/MCI who will be followed over time. The consortium will collect detailed clinical information, biospecimens, and imaging data. Led by top leaders in the field, this consortium will fill the gap in resources available for biomarker development in DLB and promote additional future research by having a readily available subject sample.

Patients may qualify for this study if they meet the requirements:

Have a diagnosis of probable dementia with Lewy bodies or dementia with Lewy body/MCI

Have a study partner who is able and willing to comply with required study procedures

Have at least 8 years of education

Must be 40 to 90 years of age

For more information, please contact Veronica Lopez, Study Coordinator at 858-822-5786, v1lopez@ucsd.edu
